Infinity 5000 Portfolio

XSTIM Smart Signalling Technology  Enabled

Infinity 5000 desktop devices are loaded with E-MetroTel's XSTIM firmware. XSTIM is smart VoIP technology that allows for signalling communication between the device and the server and provides smart features unavailable with SIP. XSTIM reduces complexity, allows for remote provisioning & support, and survivability with our SRG solution.

XSTIM also allows you to hot desk and temporarily move your device programming over to another device when you are working at another location. It allows for a single license to register your M5000 set and your InfinityOne soft client via hotdesking which is a great cost saver.

XSTIM Advanced Features

Answer DN Behavior (Ring / BLF) - The Answer DN feature allows you to answer a call ringing at another phone.

Shared Call Appearances on Incoming Calls - Presents external calls on programmable keys on multiple phones.

Multiple Appearances Directory Number - Allows an extension number to appear on more than one phone.

Call Center - Advanced Contact Center support including Login / Logout Key & Ready / Not Ready Key.

Hot Desking - Allows you to temporarily assign your extension and configuration to another phone or device.

Survivable Remote Gateway - Device can function on a secondary server if the primary server ever fails.

InfinityOne Integration - Use InfinityOne voice, IM, Chat with your extension with a single license.

Automatic Updates - An update to the UCX server automatically updates all XSTIM phones.

Ease of Programming - Features and buttons are programmed via UCX. No paging through phone menus.

Service & Support - Automatic VPN service & support access to XSTIM phones via the UCX server GUI.
